IN THE SPECIFICATION:

Please amend paragraphs [0043] and [0044] as follows

[0043] FIG. 6 shows a second alternative embodiment which is identical to the first preferred embodiment except that <u>the</u> finger nut <u>28</u> is integrated with <u>the</u> lower sleeve <u>24</u> and <u>the</u> segmented tip <u>26</u> to form <u>an</u> integrated tip 60.

Docket No.: 70240-00179

[0044] FIG. 7 shows a third alternative embodiment which joins the integrated tip 60 from FIG. 6 with the upper sleeve 22 to form a unitized sleeve 62. This embodiment does not allow the lower sleeve (formerly referred to as 24) to be removed from the upper sleeve (formerly referred to as 22), and thus must be filled using only the second procedure described above, that of removing the piston and loading the embodiment through upper sleeve entry opening 48.
